This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a useful resource for students in graduate-level courses in international management.

This volume brings together a comparative report and studies of the insolvency systems of Indonesia, Korea, Malaysia, the Philippines, Singapore and Thailand.

Tall buildings are not the only solution for achieving sustainability through increased density in cities but, given the scale of current population shifts, the vertical city is increasingly being seen as the most viable solution for many urban centers. However, the full implications of concentrating more people on smaller plots of land by building vertically - whether for work, residential or leisure functions - needs to be better researched and understood. It is generally accepted that we need to reduce the energy equation - in both operating and embodied terms - of every component and system in the building as an essential element in making it more sustainable. Mechanical HVAC systems (Heating, Ventilation and Air-Conditioning) in tall office buildings typically account for 30-40 percent of overall building energy consumption. The increased efficiency (or possibly even elimination) of these mechanical systems - through the provision of natural ventilation - could thus be argued to be the most important single step we could make in making tall buildings more sustainable. This guide sets out recommendations for every phase of the planning, construction and operation of natural ventilation systems in these buildings, including local climatic factors that need to be taken into account, how to plan for seasonal variations in weather, and the risks in adopting different implementation strategies. All of the recommendations are based on analysis of the research findings from richly-illustrated international case studies. Tried and tested solutions to real-life problems make this an essential guide for anyone working on the design and operation of tall buildings anywhere in the world. This is the first technical guide from the Council on Tall Buildings and Urban Habitat's Tall Buildings & Sustainability Working Group looking in depth at a key element in the creation of tall buildings with a much-reduced environmental impact, while taking the industry closer to an appreciation of what constitutes a sustainable tall building, and what factors affect the sustainability

The Asian financial crisis of 1997-98 shook the foundations of the global economy and what began as a localised currency crisis soon engulfed the entire Asian region. What went wrong and how did the Asian economies long considered 'miracles' respond? How did the United States, Japan and other G-7 countries respond to the crisis? What role did the IMF play?. Why did China, which suffers many of the same structural problems responsible for the crisis remain conspicuously insulated from the turmoil raging in its midst?. What explains the remarkable recovery now underway in Asia? In what fundamental ways did the Asian crisis serve as a catalyst to the current thinking about the "new international financial architecture"?. This book provides answers to all the above questions and more, and gives a comprehensive account of how the international economic order operates, examines its strengths and weaknesses, and what needs to be done to fix it.

This book provides a holistic analysis of South Korea's strategic use of mega-events in its modern development. It examines the Summer Olympics (1988), the World Expo (1993), the FIFA World Cup (2002), and the Winter Olympics (2018) over the past 30 years of the country's rapid growth, and across varying stages of economic and political development. It explains how mega-events helped to secure South Korea's position on the international stage, boost nationalism, propel economic growth in export-oriented national companies, and build cities that accommodate – as well as represent – South Korea's progress. It thereby highlights the broader implications for today's global phenomenon of increasing reliance on mega-events as a catalyst for development, while the criticism that mega-events do more harm than good proliferates. The book is ideal for academics, policymakers, and those with an interest in mega-events and their role in the development of non-western countries.

The World Investment Report series provides the latest data and analysis foreign direct investment (FDI) and other activities of transnational corporations, as well as the policies to regulate them at the national and international levels. It aims to analyse the cross-border activities of translational corporations and related policy measures with a view to helping policymakers formulate appropriate policy responses.

A comprehensive guide to the use of outsourcing logistics and supply chain operations, this text includes a review of the market, an assessment of the major providers, a description of the main services available and a consideration of the key drivers for outsourcing. In addition, it provides a detailed framework for selecting a suitable service provider.
