1. Fat Bodies --Spaghetti shaped structures that have a bright orange or yellow color, if you have a particularly fat frog, these fat bodies may need to be removed to see the other structures. Usually they are located just on the inside of the abdominal wall. 2. Peritoneum A spider-web like membrane that covers many of the organs, most easily seen covering the heart.

~~Student Guide to the Frog Dissection—Biology Corner~~

In a female frog, a pair of ovaries produce ovum and pass it to oviduct which opens into the cloaca. The cloaca is a common pathway for excretion and reproduction. At a time, 2500 to 3000 eggs are laid which are fertilized externally. For video lessons on the frog – morphology, and anatomy, download BYJU'S-The Learning App.

~~Morphology & Anatomy of Frogs Internal and External Features~~

A frog is any member of a diverse and largely carnivorous group of short-bodied, tailless amphibians composing the order Anura (literally without tail in Ancient Greek). The oldest fossil "proto-frog" appeared in the early Triassic of Madagascar, but molecular clock dating suggests their origins may extend further back to the Permian, 265 million years ago. ...
