(Health Coaches: This is of particular importance for you.) Understanding someone's ambivalence to change and the appropriate steps to take with that person based on their current mindset is essential for setting them up for long-term adherence. It all starts with motivation—the psychological drive to engage in a behavior.

Description. Exercise in later life is important for health and well-being, yet motivating older adults to exercise can be difficult. This book addresses that need by tailoring "The Transtheoretical Model" of behavior change to the client's level of readiness for change. The contributors show how TTM can be used to help older adults with varying needs and abilities to change their exercise behaviors.

The participants who were able to complete the training and to change their exercise behavior reported three main reasons for this: the experience of feeling better during and after exercise, the supportive effect of structure, and the support of the group. Feeling better during and after exercise seemed to come as a surprise to the majority of the participants interviewed, who had often had negative experiences of exercise.
