A simple equation, Pythagorean Theorem states that the square of the hypotenuse (the side opposite to the right angle triangle) is equal to the sum of the other two sides. Following is how the Pythagorean equation is written: $a^2 + b^2 = c^2$. In the aforementioned equation, c is the length of the hypotenuse while the length of the other two sides of the triangle are represented by b and a.

Families of Pythagorean Triples. If we multiply each number of a Pythagorean triple by the same number, we form another Pythagorean triple. For example, (6, 8, 10) is a family of the Pythagorean triple (3, 4, 5) because it can be obtained by $2 \times 3 = 6$, $2 \times 4 = 8$, $2 \times 5 = 10$.

Pythagorean Triples (solutions, examples, videos)

After using a Pythagorean theorem worksheet, you should have the confidence to identify right-angled triangles, find missing side lengths, identify Pythagorean triples, solve real-life problems, and use the theorem in trickier shapes. Each worksheet uses the same amazing little equation $a^2 + b^2 = c^2$, discovered around 2500 years ago.
