Rational choice theory, also known as theory of rational choice, choice theory or rational action theory, is a framework for understanding and often formally modeling social and economic behavior. The basic premise of rational choice theory is that aggregate social behavior results from the behavior of individual actors, each of whom is making their individual decisions.

Asset allocation refers to how different asset classes are proportioned in an investment portfolio, and is determined by one's investing objectives, time horizon, and risk tolerance. Asset allocation is extremely important, more so than security selection, and explains most of a portfolio's returns and volatility.

Network dynamics refer to the contexts and mechanisms that enable adaptive leadership. As defined above, context is the interactive ambiance within which complex dynamics occur, and mechanisms are the dynamic patterns of behavior that produce complex outcomes. In interactive and interdependent networks, adaptive ideas, whether small or large, emerge and interact in much the same way that pairs ...

Financial economics is the branch of economics characterized by a "concentration on monetary activities", in which "money of one type or another is likely to appear on both sides of a trade". Its concern is thus the interrelation of financial variables, such as prices, interest rates and shares, as opposed to those concerning the real economy. It has two main areas of focus: asset pricing and ...
