Father Goriot is one of French novelist Honore de Balzac's most important pieces of writing. Three lives intertwine in Paris: an old man, a criminal and a law student. The novel evokes an unstable period in France, when many were desperate to climb the social ladder into the upper classes, and it questions social institutions such as marriage. The city is an important presence in this work. Balzac was both praised and censured for his realistic portrayal of city life.

Traditionally, mechanisms are created by designer's intuition, ingenuity, and experience. However, such an ad hoc approach cannot ensure the identification of all possible design alternatives, nor does it necessarily lead to optimum design. Mechanism Design: Enumeration of Kinematic Structures According to Function introduces a methodology for systematic creation and classification of mechanisms. With a partly analytical and partly algorithmic approach, the author uses graph theory, combinatorial analysis, and computer algorithms to create kinematic structures of the same nature in a systematic and unbiased manner. He sketches mechanism structures, evaluating them with respect to the remaining functional requirements, and provides numerous atlases of mechanisms that can be used as a source of ideas for mechanism and machine design. He bases the book on the idea that some of the functional requirements of a desired mechanism can be transformed into structural characteristics that can be used for the enumeration of mechanisms. The most difficult problem most mechanical designers face at the conceptual design phase is the creation of design alternatives. Mechanism Design: Enumeration of Kinematic Structures According to Function presents you with a methodology that is not available in any other resource.

Wealth creation through trade, finance, and investment often comes at the price of rising inequality for vulnerable groups and individuals. This book examines how states can harmonise the social protection objectives of the International Covenant on Economic, Social, and Cultural Rights with their

international economic treaty obligations.

The aim of the book is to provide latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to the emerging areas of Web Computing, Intelligent Systems and Internet Computing. As the Web has become a major source of information, techniques and methodologies that extract quality information are of paramount importance for many Web and Internet applications. Data mining and knowledge discovery play key roles in many of today's prominent Web applications such as e-commerce and computer security. Moreover, the outcome of Web services delivers a new platform for enabling service-oriented systems. The emergence of large scale distributed computing paradigms, such as Cloud Computing and Mobile Computing Systems, has opened many opportunities for collaboration services, which are at the core of any Information System. Artificial Intelligence (AI) is an area of computer science that build intelligent systems and algorithms that work and react like humans. The AI techniques and computational intelligence are powerful tools for learning, adaptation, reasoning and planning. They have the potential to become enabling technologies for the future intelligent networks. Recent research in the field of intelligent systems, robotics, neuroscience, artificial intelligence and cognitive sciences are very important for the future development and innovation of Web and Internet applications.

Drawing lessons from the eFez Project in Morocco, this volume offers practical supporting material to decision makers in developing countries on information and communication technologies for development (ICT4D), specifically e-government implementation. The book documents the eFez Project experience in all of its aspects, presenting the project's findings and the practical methods developed by the authors (a roadmap, impact assessment framework, design issues, lessons learned and best practices) in their systematic quest to turn eFez's indigenous experimentations and findings into a formal framework for academics, practitioners and decision makers. The volume also reviews, analyzes and synthesizes the findings of other projects to offer a comparative study of the eFez framework and a number of other e-government frameworks from the growing literature.
